

## **Support to Telesat**

Mr Buckingham supported Telesat Canada for a variety of projects from 2003 through 2007. The work included support to Telesat's REMSAT which is a proto-type communication service for on-site disaster assistance. The prototype had been demonstrated for forest fires in British Columbia. Mr Buckingham also provided recommendations regarding turning this onto a not-for-profit business.

He also participated in initial External Review Teams (ERT's), on behalf of Telesat, for MDA's RapidEye and Cassiope projects. Along with former colleagues from Routes Astro Engineering, he helped develop Telesat's proposal for the preliminary Sapphire studies for DND.
